

INDEX

Opening Note	15
Plenary Lectures	16
Pío Tudela Lecture. Language learning throughout life	17
Plenary Lecture 1. Socioeconomic Inequity and Child Brain Development	18
Plenary Lecture 2. Brain Mechanisms Underling the Inhibitory Control of Thought	19
SEPEX Emerging Talent Award. Quantifying reliable MRI metrics in reading and vision	20
Thematic sessions	21
Thematic session 1. Experimental Advances in Numerical Cognition.....	22
Do Numbers and Letters help each other? Evidence from Masked Priming.....	22
Representation of the magnitude of symbolic and non-symbolic fractions	23
The production of multi-digit numbers is not special: An error-based study in Aphasia.....	24
Math performance and state- and trait-math anxiety: the mediating role of executive functions	25
Thematic session 2. Insights from the interplay between semantic and episodic memories .	26
Disentangling the contributions of semantic and inhibitory control processes in creative problem-solving	26
The effect of episodic and semantic retrieval on creativity in children and adults	27
Contextual incongruity triggers memory reinstatement and the disruption of neural stability	28
Have I told you this story before? The challenging dialogue between episodic and semantic processes on destination memory	29
Thematic session 3. The fallible but malleable nature of memory	30
Social network structure shapes the formation of true and false memories at collective level	30
Semantic activation and semantic control modulate episodic memory distortions: Evidence from non-invasive brain stimulation	31
Memory, is it easy to fool?	32
Learning from memory errors, did that really happen?	33
Thematic session 4. Experimental studies of psychedelics in mental health	34
Psychedelics and mental health: unlocking the therapeutic promise from animal models	34
Ibogaine as a promising tool for the treatment of substance use disorders	35
Evaluation of the antidepressant effect of psilocybin in an animal model of disease	36
Thematic session 5. On the neuro-affective response to violation of expectations.....	37
The “sweet spot” of cognitive conflict	37
Conflict regulation in flavour perception: A unitary framework for perceptual and hedonic responses	38

The investigation of music curiosity in laboratory and ecological settings	39
Cognitive model types in cross-domain clashes	40
Thematic session 6. Brain and cognitive signatures of physiological strain states	41
Neurophenomenological dynamics of mental content during breathwork	41
Multisensory redundancy effect during the wake-sleep transition.....	42
Beyond the limit: characterizing the neural dynamics of physical exhaustion	43
The Temporal Dynamics of Metacognitive Experiences Track Rational Adaptations in Task Performance.....	44
Thematic session 7. Meta-science in Psychology: Evidence from the past, reflections in the present, solutions for the future.....	45
Perverse incentives in research on unconscious cognition	45
Prevalence of preregistration in Psychology: an empirical assessment (2013-2023)	46
Beyond outright fraud: how cognitive biases can affect scientific inferences	47
Statistical power of random-effects meta-analyses.....	48
Thematic session 8. The interplay between language, memory and attention in bilinguals ..	49
Language effects in prospective memory	49
Language proficiency and false memories.....	50
The bilingual effects on cognition in Balkan bilingual populations and the socio-affective- linguistic context: Lessons learnt and new directions	51
Metacognitive processes in second language learners.....	52
Thematic session 9. Measuring individual differences with experimental tasks: current pitfalls and future directions.....	53
Can the reliability of the contextual cueing task be improved?	53
Evaluation of the Permutation-Based Split-Half Reliability in Experimental Paradigms for Habit Induction in Humans.....	54
Attention-Deficit/Hyperactivity Disorder Symptoms as Function of Arousal and Executive Vigilance: Testing the Halperin and Schulz’s Neurodevelopmental Model in an Adult Community Sample	55
An online replication and multiverse reliability analysis of value-Modulated Attentional Capture	56
Oral sessions.....	57
Oral Session 1. Language.....	58
Age-related decline in agreement resolution: an eye-tracking study in Spanish.....	58
Do bilinguals modulate the activation of their languages based on the linguistic identity of their interlocutors? Evidence from intra-sentential code switching	59
Integration of audiovisual cues in multilingual contexts: a gaze behavior study.....	60
Article-noun agreement in the parafovea does not affect skipping in Spanish	61
Neural bases of proactive and predictive processing of meaningful sub-word units in speech comprehension	62

Oral session 2. Memory	63
Enhancing retrieval-based learning with concept mapping	63
Early findings from a local dataset in a Multisite Replication of the Think/No-Think effect.....	64
Exploring the relationship between active forgetting and resting-state brain dynamics. An EEG study.....	65
Intentional forgetting, false recognition and associated subjective experience in young and old people.....	66
Negation-induced forgetting: Assessing its extent and the involvement of inhibitory processes	67
Oral Session 3. Language.....	68
The role of different articulators in cortical tracking of sign language	68
Postlexical locus of semantic interference: evidence from bimodal bilingual picture-word interference	69
The perception of iconicity in a visual language: the LSE lexicon shows more limited use of location for iconicity compared to handshape and movement	70
Orthographic effects in L1 speech production	71
Brain oscillatory activity adaptations to speech syllabic timing: MEG and behavioral evidence	72
The long-term impact of music experience on cortical tracking of speech and music: a MEG investigation on professional musicians	73
Oral Session 4. Attention	74
Unveiling the stress symphony: Analysis of acute stress as orchestrator of startle response and prepulse inhibition.....	74
Understanding the influence of relevance of salient items on attention.....	75
BeeAttentive Task: An effective tool to assess early trajectories of attentional development.....	76
Investigating the Influence of Gaze Deviation on the Reversed Congruency Effect: Comparing the Eye-Contact and Joint Attention Hypotheses	77
Neuromodulation in the healthy brain: the role of white matter variability	78
Integrating brain function and structure in the study of the human attentional networks	79
Oral Session 5. Decision-making support systems.....	80
The dilemma of human supervision in biased AI decision support systems.....	80
The influence of AI bias on human decisions.....	81
Resource scarcity and patient classification can bias causal judgement.....	82
Oral Session 6. Emotion	83
Music-induced emotions in older people	83
Emotional processing and response time. A quasi-experimental study.....	84
The emotional content of words is prioritized over syntactic mismatches in bilinguals with higher emotional resonance in L2	85
Emotion and Salience in the anticipatory brain activity of catastrophic events	86
Emotional processing impairment in individuals with ADHD: A Bayesian meta-analysis study	87
The use of differential outcomes for improving dynamic morphing facial expressions recognition in clinical populations	88

Oral Session 7. Language	89
Gender identity and sexist attitudes bias arbitrary gender word activation.....	89
Anchoring accessibility tools in preferred spatial reference frames: a study with audio description for blind and partially sighted museum visitors	90
Can motor interference change how people construct meaning from language?	91
Users of sign language do not show the body-specificity effect	92
Automaticity in the lateral space-time congruency effect: Still no convincing evidence.....	93
Oral Session 8. Working memory	94
Optimal Timing to Maximize the Pretesting Effect	94
Dissociation of the functional role of anterior and mediodorsal thalamus in familiarity and recollection processes from childhood to senescence	95
The Subtle Power of Everyday Words — Incidental Reading in Bilingual Environments.....	96
Future thinking and positivity: Exploring academic expectations in first-year university students	97
Thalamocortical contributions to working memory	98
Negation impairs memory for newly learned world-knowledge regardless of familiarity and valence	99
Oral Session 9. Perception	100
How and when do expectations shape sensory processing?	100
The influence of cognitive load on implicit time-on-space interference?	101
Ten years of experimental studies on visual preference for curvature	102
Looking for syntax in the early visual processing of multidigit numbers: it is not there	103
Active sensing is coupled to internal bodily cycles.....	104
Heart rate modulations of correct and incorrect feature integration	105
Oral Session 10. Learning	106
Visual statistical learning predicts literacy difficulties in children with dyslexia	106
The role of heart-rate variability (HRV) and sports practice in learning allocentric spatial relationships.....	107
That’s my cue! The effect of retrieval cues on the prevention of the return of fear.....	108
How to promote self-regulation of response speed and learning? The relevance of instructions and task feedback	109
Effectiveness of extinction with response prevention on costly and costless avoidance behavior	110
Oral Session 11. Language	111
Immediate semantic integration of newly learned words in children’s native and second language.....	111
Spread the word: Semantic memory and unwarranted beliefs.....	112
The role of semantic feedback in the recognition of emotional words.....	113
Enhancing Digital Reading: Insights from Eye Movements and Brain Activity.....	114
What makes brand names special? An electrophysiological approach	115
The relevance of top-down processes in the recognition of incomplete words: an ERP study.....	116

Oral Session 12. Attention. Learning	117
Attentional hemispheric specialization through the right frontal eye field: a TMS-EEG study.....	117
Target or not? Eye movements as a tool to understand visual search.....	118
Still searching for an effective way to produce trial-by-trial congruency cueing in a Stroop task.....	119
Neural mechanisms of attentional integration and selection across time.....	120
Enhancement of the prediction error in extinction through compound presentation with novel stimuli.....	121
Oral Session 13. Decision making. Thought. Language	122
Neural correlates in the time course of inferences: costs and benefits for less-skilled readers at a university level	122
On the nature of the inhibitory neighbourhood effect: A masked priming study with European Portuguese-English bilinguals	123
The influence of bilingualism on verbal memory in patients with Parkinson's Disease.....	124
Machine learning for analysing oral production in primary progressive aphasia.....	125
Language processing networks to analyze the semantic system in Parkinson's disease on/off dopamine medication in a verbal fluency task	126
Oral Session 14. Executive Functions	127
Urban experience alters lightness perception.....	127
Executive functioning in convergent and divergent creativity	128
Nature's influence on attentional control processes: behavioral and electrophysiological results.....	129
Evaluation of the relationship between cognitive reserve and experience in the practice of Aikido with executive functions: a pilot study.....	130
Novel task assembly across the frontoparietal cortex recruits both generalizable and high-dimensional neural codes	131
Oral Session 15. Neurodevelopment + Working memory	132
Recent findings on the neurodevelopment of language and executive functions in prelingually deaf children.....	132
Early development of electrophysiological connectivity networks in relation to the emergence of cognitive control	133
Working Memory Capacity can modulate the space-time interaction	134
Exogenous spatial retro-cues select associated novel stimulus-response bindings in working memory.....	135
Effect of Working Memory Overload on Emotional Responses and Recognition Memory: Subjective and Brain Correlates	136
Oral Session 16. Other	137
Exploring the role of perceptual size in the comparison of multi-digit numbers	137
Advanced MRI protocols to study subcortical contributions to cognition: The thalamus and language function.....	138
Structural dynamics of human cortico-subcortical connections across the lifespan: the case of thalamocortical projections.....	139

Mayday: AI needs (Cognitive) Psychology, both for Science and Society	140
Speech markers of dementia and depression in older adults	141
Single trial analysis of EEG data reveals frontal theta and parietal alpha modulations during navigation in a virtual reality environment.....	142
Posters	143
Anchoring accessibility tools in preferred spatial reference frames: a study with audio description for blind and partially sighted museum visitors	144
Attentional hemispheric specialization through the right frontal eye field: a TMS- EEG study	145
Speech markers of dementia and depression in older adults	146
Modulating Emotional Responses to Music by Transcranial Direct Current Stimulation (tDCS) of the Ventro-Medial Prefrontal Cortex (vmPFC): Magnetoencephalographic Correlates.....	147
Auditory Distraction: Deviant Sounds Hinder Response Repetition and Facilitate Response Change	148
Eyes only: The reversed spatial Stroop effect cannot be generalized to head targets	149
An exception to the exception: meta-analysis on syntactic skills in Williams syndrome.....	150
Context-based distraction by deviant sounds does not correlate with ADHD symptomatology.....	151
Inhibition Dynamics in Survival Memory: Investigating Forgetting's Influence on Survival-Relevant Stimuli	152
Reducing Correspondence Bias: the effect of Moral Elevation on social perception.....	153
Speech error classification, production performance study, and successive response analysis using	154
Affects Explicit and Implicit Negation on attitudinal sentences: a tDCS study.....	155
The ratio "fixations/ saccades" in eye movements: It is useful to detect the strategy used while solving a Mental Rotation task?.....	156
Exploring the second language lexicon through the N400 ERP component.....	157
Value-modulated attentional capture depends on explicit awareness.....	158
Extinction Burst and Response Competition	159
Speech Recognition from a Familiar Speaker Engages the Person Identity Network	160
Unlocking Speech: Brain-Computer Interfaces for Communication Restoration in Speech Disorders.....	161
Semantic Processing in Population over 60 years: The Role of Body-Object Interaction (BOI).....	162
Do affective properties vary across languages? A comparison between emotion-label and emotion-laden words	163
Assessing fitness-to-drive using the Orienting Hazard Prediction Test: Data from stroke survivors	164
Learning new vocabulary in L2: the role of context of learning, proficiency, and proactive control	165
Assessing the effectiveness of the Maastricht Acute Stress Test for stress induction: Final outcomes in the Spanish population	166
Random sequences, experienced coincidences and pseudoscientific beliefs	167
Susceptibility to persuasion as a predictor of belief in pseudoscience	168

The mediating role of learning in the relationship between goal orientation, time management, and academic performance	169
Language and Numerical Cognition: A Predictive Relationship Based on Componential and Holistic Processing	170
The role of semantics and morphology in the affective content of Spanish pseudowords: A normative study on wordlikeness, valence and arousal	171
The effect of eco-friendly labelling on estimations about environmental impact of human actions	172
Taming the wandering mind with mindfulness training: A meta-analysis of causal evidence	173
Conduite d'approche in Conduction Aphasia: Which psycholinguistic and experimental variables drive it – A case study	174
Beware of gender agreement errors: They can affect emotional processing!	175
An evaluation of the iconicity of 1,525 pictograms from the Aragonese Portal of Augmentative and Alternative Communication (ARASAAC)	176
Letter processing in sentence comprehension: influence of case alternation and letter-like symbols on reading efficiency.....	177
Closed-loop neurofeedback to improve conscious perception	178
Factors related to memorability from the mega-study approach: exploring the unique contribution of objective, subjective, associative and emotional verbal attributes.....	179
From Screen to Mind: Understanding how we Remember Mobile App Logos.....	180
Investigating behavioral expression of habitual control using monetary rewards.....	181
Older drivers have fewer accidents during simulated driving.....	182
Don't stop me now! A study of habit responses in humans through the degraded contingency paradigm..	183
Processing objects and events in locative sentences in Spanish: An eye-tracking study	184
Do words burn in a second language?' Processing literal and metaphorical pain in L2 discourse comprehension: an ERP study	185
Could direct experience be a vaccine against suggestion?.....	186
Semantic distance reduction predicts the intensity of the Aha! experience in one-shot perceptual learning.....	187
Neural correlates of the pulvinar and mediodorsal thalamus in visual search guided by explicit and implicit cues	188
Examining the impact of participants' baseline working memory capacity and task difficulty on the effects of theta tACS to modulate working memory maintenance	189
Compound-RAT as a candidate for semantic control assessment: an fNIRS study	190
Inhibitory learning in latent Inhibition: more evidence from superconditioning and protection from extinction.....	191
Bringing Visual Search to Life: how we find colored objects when performing a natural task.....	192
Iconic memory in adult dyslexia: reduced accuracy in change identification of pseudoletters	193
Explicit knowledge modulates reversal learning in value-modulated attentional capture	194

Surgical masks and female own-gender bias: implications for lineup accuracy	195
False recognition in the DRM paradigm: time-course of ERP response and behavioural correlates.....	196
Differential effects of resource levels in encoding on true and false memories in DRM paradigm.....	197
Thinking fast and right: individual differences in the strength of mathematical intuitions	198
False recognition in the context of bilingualism: Assessing false memory with ad hoc categorical, associative and taxonomic lists.....	199
An Ace Under the Inferior Parietal Cortex to Preserve Verbal Repetition	200
Joint effects of dyslexia and fog on the recognition of words in traffic signs.....	201
La influencia del sexo y el rol de género en la atención social: un estudio sobre su relación con habilidades sociales y orientación académica	202
Spatial and drawing abilities in artists and non-artists.....	203
Exploring the effect of binge drinking pattern of consumption and physical activity on an attentional task.....	204
An Eye-tracking study on the Pragmatics of Negation.....	205
Bilingualism and cross-language similarity modify the phase of alpha oscillations during naturalistic sentence reading.....	206
Effects of transcranial alternating current stimulation (tACS) over frontal-midline theta oscillations on decision-making and functional connectivity: a Bayesian approach.....	207
Lectures vs. Practice: Does Listening Alone Foster Critical Thinking?.....	208
Differential cross-modal affective priming in first and second language: behavioral and electrophysiological evidence.....	209
Individual differences in the causality bias under disfluent conditions: Raven’s progressive matrices negatively correlate with the illusion of causality when the information is hard-to-read	210
Handwriting processing in children with attention-deficit/ hyperactivity disorder with/without dyslexia....	211
Learning of linguistic rules with more or less attention involves distinct brain networks and different neural encoding	212
The neural markers of mild cognitive impairment in breast cancer patients: a multimodal approach to detection, predict, and monitor	213
Investigating Metacontrol and Mind-Wandering: Evidence from a High-Definition tDCS Study.....	214
Temporal Dynamics in Gender Stereotype Representation and Its Influence on Face Perception	215
Investigating Cognitive Domain Interactions: Linguistic and Numerical Processing of "Increase" and "Decrease" concepts	216
Contextual cueing and working memory: Studying the dependence of task difficulty on the expression of the effect	217
The use of the differential outcomes procedure for improving attentional control.....	218
Background music effects on sustained attention and working memory.....	219
Exploring the Circadian Influence of Cognitive Processes that Do and Do Not Require Cognitive Control: Evidence from the Self-Prioritization Effect (SPE)	220

Streams of conscious visual experience: a functional connectome study	221
Dynamic neural codes of content and geometry during a novel instruction task.....	222
The balance of goal-directed and habit systems: A look into individual differences	223
A novel paradigm to study the interactions between selective attention and expectation during preparation.....	224
Decoding neural codes of stimulus category in EEG: similarities and differences observed under different functional relevance priorities	225
Misconceptions and active denial might be critical for negation-induced forgetting.....	226
Analysis of executive functions in a sample of the impulsive-compulsive spectrum through a virtual reality task: ICE CREM Nesplora.....	227
Mouse-Tracking as a Window into Rule-Based Reasoning.....	228
Is the reversed congruency effect observed with gaze due to its social nature? Analysis of non- social stimuli with similar asymmetrical contrast features of eye-gaze stimuli	229
Reading in English as a Foreign language by Spanish-speaking children: second, fourth and sixth grades ...	230
Hierarchical Detection of Auditory Irregularities in Early Infancy: An Event Related Study	231
Impact of Sleep Duration on Lexicalization: Paradoxical Effects on Implicit Memory	232
An analysis of the unconscious processing of hierarchical patterns through Bayesian and General Recognition Theory models	233
Exploring taboo words among young Spanish speakers	234
How do adults attribute responsibility in bullying situations?	235
An open-source approach for closed loop cognitive studies.....	236
Effects of a multi-modal auditory environment on language acquisition	237
Role of cerebellum in cognitive flexibility, inhibitory control and working memory: a transcranial direct current stimulation (tDCS) double-blinded and sham-controlled study.....	238
Designing a Task to Measure the Impact of Spatial Layouts on Categorization Learning.....	239
The Effects of Proactive Interference in Working Memory Over Time	240
Smart Starts: Cognitive Differences Predict Prior Knowledge Involvement in Language Learning.....	241
Influence of Emotional States and Cognitive Flexibility on Inhibitory Control Performance.....	242
How Children with Reading Problems Represent Temporal Information. A pilot study.....	243
Subcortical contributions to the origin of individual differences in learning the specific sounds of a second language	244
Context-dependent allocation of attentional control in anxiety and uncontrollability: The role of flexible learning	245
Unravelling the syntactic processing of missing objects in Spanish-Catalan bilinguals.....	246
Effect of bilingualism experience on attentional spatial orienting skills in beginner readers.....	247
Semantic and arithmetic additions: a study of cross-domain cognitive processing.....	248

Testing the causal role of the motor system in language comprehension: A preregistered, multilab, TMS study	249
Is there value in value-driven distraction? A meta-analysis of studies on individual differences	250
The Vienna Art Interest and Art Knowledge Questionnaire and the Aesthetic Fluency Scale translated into Spanish: an analysis of their factor solution and psychometric properties.....	251
Eye-tracking during reading at high and low sampling rates.....	252
Handwriting vs. Keyboarding: Performance Disparities in Spanish Adults with Dyslexia	253
Eyes on the road: applying human visual patterns to autonomous vehicle technology	254
