

Content

COURSE INTRODUCTION.....	5
Collaborative Exercises	5
Practical Work in the Lab.....	5
Collaborative Presentations	5
Integration of Industry Visits.....	5
Industry Visits Linked to Course Program	6
The Written Report after each visit.....	8
INTRODUCTION TO DIAGRAMS IN CHEMICAL ENGINEERING	10
LIST OF PROBLEMS NUMBER 1	10
TITLE Chemical Process Diagrams	10
Contextualization and activities.....	11
Problem 1.1: Definitions.....	12
Problem 1.2: Milk Bottling Line in a Dairy Factory	14
Problem 1.3: Orange Juice Production	14
Problem 1.4: Mass balance issues in MTBE production	15
Problem 1.5: Process: Ethylene Production Plant.....	17
Problem 1.6: Flow Process Diagram Issues	17
Problem 1.7: Application activity.....	18
INTRODUCTION TO ECONOMIC FACTORS.....	21
Visit written reports and economic factors	22
LIST OF PROBLEMS NUMBER 2.1	23
TITLE: Investment.....	23
Problem 2.1.1: Analysis for Chemical Plant Alternatives	25
Problem 2.1.2: Project Cost Estimation Based on ISBL Percentage.....	25
Problem 2.1.3: Project Cost Estimation Based on ISBL Percentage.....	26
Problem 2.1.4: Investment Estimation Based on Economies of Scale.....	27
Problem 2.1.5: Analysis of Scaling Exponents and Capacity Ranges from Towler and Sinnott Data.....	28
Problem 2.1.6: Capital Cost Estimation for Glucose Production	28
Problem 2.1.7: Cost Estimation for Microalgae Biomass Processing	28
Problem 2.1.8: Cost Estimation for Spray Dryer Equipment	29
Problem 2.1.9: Capital Cost Estimation for Microalgae Bioreactor Lighting	29

LIST OF PROBLEMS NUMBER 2.2	31
TITLE: Production costs.....	31
Problem 2.2.1: Production of Ethanol from Corn Fermentation	34
Problem 2.2.2: Cost of Electrical Heating in Chemical Process	35
Problem 2.2.3: Energy Calculation for Water Evaporation in an Evaporator	36
Problem 2.2.4: Production costs associated with a Compressor.....	37
Problem 2.2.5: Cost Estimation for a Yeast Fermentation Plant.....	38
LIST OF PROBLEMS NUMBER 2.3	40
TITLE: Project viability.....	41
Problem 2.3: Investment and Financial Analysis	41
Introduction to the use of Simulation Software: Epsom Salt Production Plant	42
INTRODUCTION TO SAFETY ASSESSMENT METHODS	45
LIST OF PROBLEMS NUMBER 3	50
SAFETY IN CHEMICAL AND BIOTECHNOLOGICAL PROCESS	50
Problem 3.1: To identify potential hazards within a specific node of an industrial plant	50
LABORATORY PRACTICE NUMBER 1	53
Title: Cultivation and Growth Assessment of <i>Saccharomyces cerevisiae</i>	53
LABORATORY PRACTICE NUMBER 2	58
Title: Determination of Microalgae Extinction Coefficient and Light Availability in Bioreactors	58
LIST OF PROBLEMS NUMBER 4	65
TITLE: Growing microorganisms.....	65
Problem 4.1: Biomass Concentration via Dry Weight Measurement	65
Problem 4.2: Monitoring microalgae growth in a bioreactor	66
Problem 4.3: Designing a raceway	68
Problem 4.4: Designing a tubular bioreactor	69
Problem 4.5: CO ₂ Remediation at a Power Station	70
Problem 4.6: Bioproduct Productivity	70
Contextualization of equality in Biotechnology	71
REFERENCES	72
